

## To know how to estimate the position of numbers on a number line

1 Draw arrows to estimate these numbers on the number line.

a 45

b 95

c 35

d 15

2 Draw arrows to estimate these numbers on the number line.

a 12

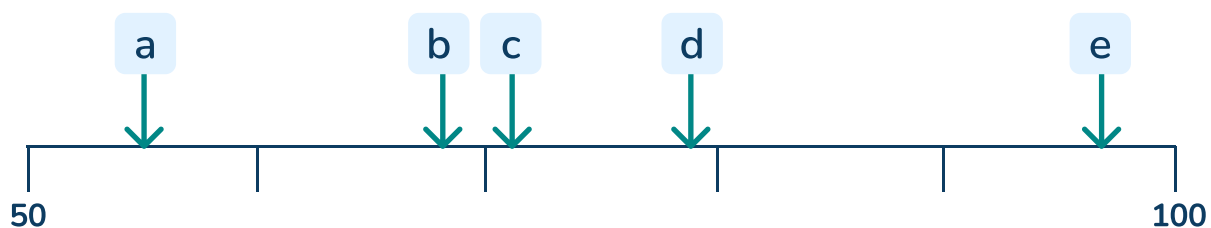

b 51

c 29

d 68

3 Estimate which number the arrow is pointing to.

## To know how to estimate the position of numbers on a number line

Question Number	Question	Answer
1	Draw arrows to estimate these numbers on the number line.	a) Halfway between 40 and 50 b) Halfway between 90 and 100 c) Halfway between 30 and 40 d) Halfway between 10 and 20
2	Draw arrows to estimate these numbers on the number line.	Arrows should be drawn in roughly accurate positions on the number line (e.g. 12 closer to 10 than 20 and closer to 10 than the halfway point between 10 and 20).
3	Estimate which number the arrow is pointing to.	a) Approximately 55 b) Approximately 68 c) Approximately 71 d) Approximately 79 e) Approximately 97
