

To understand how to compare groups by matching one-to-one

- 1 6 children are going to the beach. Are there enough beach balls for them?
How many do they need?
Can you draw a picture to show this?

- 2 Which group do the eggs match?
Draw a picture to show this.

- 3 Each snail would like a flower.
Are there enough flowers?
How many more are needed?
Draw the flowers that are needed.

To understand how to compare groups by matching one-to-one

Question Number	Question	Answer
1	6 children are going to the beach. Are there enough beach balls for them?	There are only 5 balls. There would not be enough beach balls for each person. 6 balls would be needed for each person to have a ball. 6 balls (and 6 people if desired) should be drawn.
2	Which group do the eggs match?	The black cats match the eggs. There are 4 eggs and 4 black cats.
3	Each snail would like a flower. Are there enough flowers? How many more are needed? Draw the flowers that are needed.	There are not enough flowers. 2 more flowers are needed to match the snails.
